RE: Comments on Draft MAC Report

I encourage the ARB to support 100% auction of permits. ARB should reject grandfathering.

Revenues should be recycled for public energy-related purposes. Examples are helping the disadvantaged and encourage public transport.

Trading should be supplemented by policies such as renewable energy feed-in tariffs, zero emission vehicles, good transportation and smart urban planning.

Carbon caps should cover imported energy.

Offsets are acceptable only if they are real and enforceable. Enforcement mechanisms need teeth.

Sincerely,

Paul P Craig
